Summary

Technical Support specialist with a focus on SQL scripting and network administration. Proven ability to manage complex technical projects and deliver software solutions through root cause analysis and remote troubleshooting. Passionate about system analysis and problem-solving, with academic experience in Python, C#, and C, dedicated to building and maintaining efficient technical solutions.

Career History

Academic Projects / Student
Aug 2023 - Present (2 years 5 months)

- Focused on technical development and root cause analysis for academic projects involving GesturiX, MediBridge, and CampuSee.
- Provided remote technical support and troubleshooting for 10+ beta users, utilizing root cause analysis to resolve SQL connectivity issues and video latency.

Skills Inventory

- **Technical Support Stack:** SQL (Scripting), Network Administration (Cisco Packet Tracer), Remote Troubleshooting, Windows Server Administration.
- **Tools & Infrastructure:** Remote Desktop/VPN, Software Deployment, Monitoring (Datadog/AI-driven triage), Cloud Data Migration, Software Upgrades.
- **AI & Automation:** AI-driven Triage, Machine Learning (PyTorch), Automated Workflow Support.
- **Programming:** Python Programming, C Programming, C#.

Languages

Cebuano, English

Education

Bachelor of Computer Engineering from Cebu Institute of Technology

1. GesturiX – Sign Language Learning Companion

Role: ML Engineer

Description: Developed a modern accessibility tool enabling users to learn and translate sign language via real-time recognition.

Key Features: Implemented real-time language translation, interactive video tutorials for learning, and customizable user profiles.

2. MediBridge – Telemedicine Platform

Description: Built a full-stack platform connecting patients with healthcare professionals for secure and efficient medical consultations.

Key Features: Integrated AI-powered symptom checking, real-time video conferencing, and secure patient-doctor authentication protocols. Provided remote technical support and troubleshooting for 10+ beta users, utilizing root cause analysis to resolve SQL connectivity issues and video latency. Performed root cause analysis on connectivity issues during video conferencing integration and optimized SQL queries for patient data retrieval.

3. CampuSee – Campus Resource Hub

Role: Frontend Developer

Description: Engineered a student-exclusive platform to centralize campus communication, resource sharing, and academic support.

Key Features: Developed the Student Authentication System, search functionality, and real-time notification systems to foster student collaboration. Collaborated with campus stakeholders to gather technical requirements and delivered project updates, ensuring alignment with user needs and project timelines.
